

T2: Query Formulation

- Investigate query generation/transformation approaches for Boolean queries
 - Query expansion/reduction
 - Query rewriting
- Apply domain specific approaches to queries from systematic reviews
- Improve the query formulation process by providing methods to suggest better queries prior to searching

T3: Retrieval for Screening

- Investigate if the query and document relationship can be improved
 - The structure of a document could be improved to better support queries (e.g. additional labels, text classification)
- This task differs from the previous in that it does not look at improving queries, but improving the search system
