T3: Retrieval for Screening

- Investigate if the **query and document relationship** can be improved

  - The structure of a document **could be improved to better support queries** (e.g. additional labels, text classification)

- This task differs from the previous in that it does not look at improving queries, but **improving the search system**

- This work was published in **CIKM 2017**

Task 3: Retrieval for Screening

- Aim:

  - Retrieve all relevant studies while minimising non-relevant

  - PICO is sometimes used to formulate the Boolean query, however it is not used by the underlying search system

    - **Should it be?**
