QVPP

- How do researchers know if the query they have formulated is effective?

- Can we suggest better, more effective queries, prior to the screening phase?

- Propose a new task called Query Variation Performance Prediction

QVPP

- For the query variation performance prediction (QVPP) task:

  - Title of the systematic review is used as a "seed" query

  - Query variations are generated via query reduction

  - general purpose QPPs to rank variations based on predicted performance

- QPP task of predicts performance across topics

  - QVPP attempts to predict performance across queries in a topic (and therefore ranks them)
